

## Profitable Management of clover leys

*Save costs and improve animal performance with better clover management*

### Two workshops:

**Monday 13 June, 10am – 4pm**

**(Back o'Th Brook Farm, Waterfall ST10 3JA, Staffordshire, hosted by Clive Langford-Mycock)**

**Tuesday 14 June, 10am – 4pm**

**(Pound Farm, Holme Lacy, Hereford, HR2 6LL, hosted by Daniel Seaborne)**

Two one-day workshops for farmers and growers in the West Midlands area (Herefordshire, Worcestershire, Shropshire Warwickshire and Staffordshire). The workshops are for conventional *and* organic farmers and are open to those with many years of experience of clover as well as those new to the crop. The workshops will be run by three of the UK's leading specialists in clover management: Dr Heather McCalman (IBERS), Francis Dunne (Field Options) and Mark Measures (adviser, researcher and farmer) and will be held on farms growing clover leys, with an opportunity to discuss the management, grazing and conserving of clover.

Clover can supply 200 kg Nitrogen per hectare, reduce or eliminate nitrogen fertilizer use, improve stock performance from higher protein and palatability, provide fertility for following crops and reduce green house gas emissions.

These two farm based workshops will draw on 30 years' commercial experience and the latest research in legume management to help you get the most from clover. Workshops will:

- Help you decide on the best grass and clover seed mixtures for your farm
- Provide the latest on white clover, red clover, lucerne and trefoil
- Provide information on establishment, nutrient requirements, conservation and grazing
- Show how you can save costs and reduce your carbon footprint

Costs and booking form overleaf.

These workshops are run by IOTA and funded by Graig Producers and LANTRA.

## Two workshops: Profitable Management of clover leys

*Save costs and improve animal performance with better clover management*

**Monday 13 June, 10am – 4pm (Staffordshire workshop, Back o'Th Brook Farm, Waterfall)**
